COMPANY PROFILE

企业简介

专注感染控制领域 · 争做行业标杆企业

山东佳境医疗科技有限公司，成立于 2016 年，公司现驻山东淄博高新区。公司专注医疗感染控制领域，目前拥有空气净化消毒设备、口腔感染控制设备、内镜清洗消毒设备三条产品线。

公司秉承“技术创新，驱动企业发展”理念，拥有完全自主研发团队。创新能力业内领先，为国家高新技术企业、省级专精特新企业，已拥有国家发明专利 4 项，国家实用新型专利 46 项，计算机软件著作权 5 项，参与行业标准起草 1 项，目前上市在售产品 120 余种。

“恒佳境”牌感染控制类设备，已先后入驻北京协和医院、四川大学华西医院、浙大邵逸医院、上海中山医院、武汉同济医院等国内大型三甲医院，目前已拥有 1000 余家医院客户。

未来公司将坚守医疗感染控制行业，坚持技术创新，持续让客户满意，坚持艰苦创业，以奋斗者为本的企业文化，不断提升企业发展。

Shandong Jiajing Medical Technology Co., Ltd., located in Zibo High-tech Zone, Shandong, was established in 2016. We have been focusing on the field of medical infection control since inception and currently have three product lines: air disinfection and purification, dental clinics infection control, and endoscope reprocessing and storage.

We adhere to the concept of "Technology innovation drives enterprise development" and have completely independent R&D team with leading innovation capabilities in the industry. We are awarded National High-Tech Enterprise and a provincial-Level Specialized, High-End And Innovation-Driven Little Giant. We have possessed 4 National Invention Patents, 46 National Utility Model, 5 computer software copyrights and participated in the drafting of 1 industry standard. Currently, more than 120 products have been in the market.

"Hengjiajing" brand infection control equipment has been installed in top Grade III Level A hospitals in China such as Peking Union Medical College Hospital, West China School of Hospital in Sichuan, Xiangya Hospital in Hunan, Shandong Provincial Hospital etc. and over 1000 hospitals are using our equipment.

In the future, the company will stick to the medical infection control industry, adhere to technology innovation, to satisfy customers; adhere to corporate culture of hard work and striving; continuously promote corporate development.

HONOR

荣誉资质

专利技术

获得 4 项发明专利，46 项实用新型专利。
Obtained 4 invention patents, 46 utility model patents.

BRIEF INTRODUCTION TO AIR DISINFECTION

空气净化消毒器简介

01 何为空气净化消毒

What is air disinfection
降低或消除室内空气中悬浮的细菌、病毒等有害物质，使其达到无害化程度的方式称为空气净化消毒。
Reduce airborne infection by reducing or eliminating airborne bacteria, virus and other microorganisms

02 空气净化消毒的方法

Air disinfection methods
静态消毒：所选择的消毒产品对人体存在直接或间接的伤害，在针对空气净化消毒时，操作人员需佩戴防护用品，其他人不能留在正在消毒的空间。此种消毒方式称之为静态消毒。
常见静态消毒器械有臭氧消毒机、过氧化氢消毒机、紫外杀菌灯管。

Passive Disinfection: disinfecting factor will be spread to the whole room and the operator need to take protective measures and other people should stay in room under disinfection.
Passive Disinfection Equipment: Ozone generator, Hydrogen Peroxide generator, UV lamps.

动态消毒：所选择的消毒产品对人体无任何危害，针对空气净化消毒时人员无需离开消毒场所，不存在任何副作用。此种消毒方式称之为动态消毒。
常见的动态消毒器械有医用等离子空气净化消毒器、室外空气消毒器、空气净化消毒器、负压净化消毒器等。

Active Disinfection: air is circulated into an enclosed space and disinfecting factor will not be released into environment, posing no harm to people around them. This type disinfection machine can be run when people are around the machine.
Active Disinfection Equipment: Medical Plasma Air disinfection machine, UV Air disinfection machine, Slim Air Disinfection Machine, Superior Air Disinfection Machine.

03 正确选择空气净化消毒器的因素

Aspects to be considered when selecting air disinfection machine
房间大小：每一台空气净化消毒器械在参数时都会标注其适用体积，保证其能在此体积空间内具有有效杀菌效果。

安装方式：消毒器一般有壁挂式、移动式、吸顶式三种安装方式。根据房间性质选择合理的安装形式。

消毒方法：根据房间人员的活动情况（是否 24 小时有人）和消毒要求（是否需要彻底消毒、是否需要方便彻底消毒）选择最佳消毒方式的空气净化消毒器。

Space Volume: Applicable space parameter was labelled for every disinfection machine during registration to ensure the optimal disinfection effect.

Installation: Generally there are three installation ways: wall-mounting, movable and ceiling mounting which are employed as per space requirements.

Disinfection methods: Whether people are always present and disinfection standard (e.g. if object surface disinfection or cleanliness Class 10,000 is needed) shall be considered.

04 空气净化消毒的意义

Why air disinfection is needed?

家庭：避免不良室内空气质量加重人体免疫系统负担，造成体力耗损。降低空气污染所引发的过敏性鼻炎、气喘、肺病等免疫系统疾病，促进人身心健康。

工厂：预防食品、化妆品、药品等在生产、冷却、灌装及内包装过程中，被空气中的细菌二次污染，保障产品质量安全。

医院：有效控制病原体，各病区之间空气流通而导致的二次污染，降低感染与医护人员、病患与医护人员之间的交叉感染。

Home: avoid polluted indoor air increase body's immune system extra burden which can cause physical loss. Air pollution can also incur immune system diseases like Leukemia, Asthma, and Emphysema the risk of which can be reduced by air disinfection.

Factory: Prevent food, cosmetics, medicines, etc. from being contaminated by airborne microorganisms during the production, cooling, and packaging process to guarantee product quality and safety.

Hospital: effectively control the disease transmission caused by the air flow between departments and wards, and reduce the cross-infection between patients and accompanying staff, and between patients and medical staff.

JIAJING MEDICAL INTERNET OF THINGS (IOT) MANAGEMENT SYSTEM

佳境域医疗物联网管理系统

○ 医院、科室、护士站监控管理

Monitoring and management of hospital and department

○ 匹配多种终端

Match various client

○ 分配账户，无需注册，安全性更高

Network is constructed by Jiajing Medical. Customers do not need to register which is safe and convenient.

实时监控设备运行状态

Real-time monitoring of equipment operating status

能够实时监控设备的各运行状态，判断设备是否运行正常，及时提醒用户和厂家进行设备的维修和保养。
IoT can monitor the operating status of the equipment in real-time, judge whether the equipment is running normally, and remind users and manufacturers to repair and maintain the equipment in time.

集中控制设备操作功能

Integrated control of equipment operation

能够远程控制一台或多台设备的所有操作，无需现场人员操作，大大节省使用人员的工作量。
IoT can remotely control all operations of one or more devices, without the need for on-site personnel to operate one by one, greatly reducing the labor of users.

自动记录设备使用数据

Automatically record device usage data

能够记录设备的运行数据，包括设备累计时间和消毒记录等，方便对设备的使用记录进行查询和追溯。
IoT can record the usage data of the equipment, including the accumulative running time of the equipment and the disinfection records, etc., facilitating the inquiry and tracing of the usage records of the equipment.

随时查询设备所有信息

Check all equipment information at any time

能够查询设备所有信息，包括设备的采购、启用、维护及分布等全生命周期数据信息，方便设备管理。
Able to query all equipment information, including equipment purchase, activation, maintenance and distribution, etc., to facilitate customer equipment management.

生成导出设备数据报表

Generate export device data report

能够自动生成和导出设备的各项所需数据报表，方便用户打印、存档、查询。
IoT can automatically generate and export various equipment data reports of the equipment, which is convenient for users to print, archive, and refer to.

MEDICAL MULTIPLE DISINFECTION FACTORS SYSTEM

医用复合式空气消毒器

该系列空气消毒器集成了等离子体、紫外线、TiO₂、ULPA、分子净化技术等所有可人机共存的消毒技术，可消毒去除小至0.01μm的细菌颗粒，细菌单次消毒率可达100%，出风口洁净度百级。该系列产品可有效实现院内Ⅰ类手术室的消毒效果，特别适用于手术室、ICU、内镜中心、血液病区、烧伤病区等有较高消毒净化需求的场所。

This series of air sterilizers integrates plasma, ultraviolet, TiO₂, ULPA, molecular purification and other air disinfection techniques that can co-exist with humans. The machine can disinfect and remove bacterial particles as small as 0.01μm, and the single-time bacterial disinfecting rate can reach 100%, air outlet cleanliness class 100. This series of products can effectively achieve the disinfection levels of Class I and Class II environment in hospitals, and is especially suitable for places with high level air disinfection and purification requirement, such as operating rooms, ICUs, endoscopy centers, blood wards, and burn wards.

可配置洁净隔帘罩使用，为血液病患者、烧伤患者、器官移植患者及其他免疫力低下患者提供有效的洁净防护空间。
It can be used in conjunction with a mobile laminar flow canopy to provide available clean and protective space for patients with blood diseases, burn patients, organ transplant and other immunocompromised diseases.

PRO RANGES

LAMINAR FLOW PURIFICATION AND DISINFECTION MACHINE

层流净化消毒机PRO

层流净化消毒机 Pro 系列由初中效过滤器、风机、紫外线杀菌灯、等离子体发生器、高效过滤器等组成。室内空气在风机的作用下，循环经过紫外线杀菌灯进行杀菌消毒，通过高效过滤器实现室内空气的净化，出风口区域可达到百级洁净空间，持续运行可使整个空间达到万级洁净度。

The Pro series laminar flow purification and disinfection machine consist of pre-filters, fans, ultraviolet germicidal lamps, plasma disinfection module, and HEPA filter. With the functioning of fans, the indoor air is circulated through the area of the ultraviolet lamp for disinfection, through the HEPA filter for purification. The air outlet area can reach ISO 5 cleanliness, and after continuous running, ISO 6 cleanliness can be achieved.

ULTRAVIOLET AIR DISINFECTOR

紫外线空气消毒器 —— 经典系列

KXZ 系列紫外线空气消毒器产品主要有风机、初效过滤器、紫外杀菌模块和分子过滤器组成。采用室内空气循环风方式。将空气引入机器内部直接杀灭细菌，减少室内空气污染。改善空气质量，保护医护人员身体健康。本系列产品可在有人和无人的状态下连续对空气消毒，且不生成二次污染。实现院内 II、III 类消毒环境的消毒效果。

KXZ series UV air disinfection machine mainly consist of fan, pre-filter, UV disinfection module and molecular filter. Indoor polluted air circulates through each disinfection and purification module by centrifugal fan. Then, air becomes clean. People can be around when machine is working, and no extra harm caused. This series of products can help achieve hospital class II and Class III environment.

HYDROGEN PEROXIDE AIR DISINFECTOR

过氧化氢空气消毒器（汽化）

过氧化氢消毒器由汽化单元、扩散单元、降解单元、控制系统、壳体等组成。利用气态过氧化氢对整个密闭空间进行杀菌消毒。利用闪蒸技术将过氧化氢溶液汽化，通过风机驱动和过氧化氢气体的扩散作用，使过氧化氢气体快速弥散到整个消毒密闭空间；气态过氧化氢极易生成游离的 OH·，游离的 OH· 更具有活性可攻击细胞组织成分，包括脂类、蛋白质和 DNA 组织，从而实现对整个密闭空间的消毒。

Hydrogen peroxide disinfectant is composed of vaporization unit, diffusion unit, degradation unit, control system, housing, etc. using gaseous hydrogen peroxide to disinfect the whole confined space.

The flash evaporation technology is employed to vaporize hydrogen peroxide solution. Through the diffusion of hydrogen peroxide gas driven by fan, hydrogen peroxide gas is quickly dispersed into the every corner of confined space. Free OH· is easy to generate from gaseous hydrogen peroxide. Then active free OH· can attack cell components like lipids, protein and DNA, so as to realize the disinfection of confined space.

产品参数 PRODUCT SPECIFICATIONS

HYDROGEN PEROXIDE ATOMIZING DISINFECTOR

过氧化氢雾化消毒器（干雾）

过氧化氢雾化消毒器利用高压高速气流与文丘里原理将过氧化氢消毒液迅速变成干雾状，使过氧化氢快速弥散到整个密闭空间；过氧化氢微粒中高活性羟基以及活性基团作用于细菌病毒，利用其强氧化性破坏细胞核膜，病毒中的蛋白质，使其死亡，从而实现对密闭空间消毒。

Hydrogen peroxide atomizer turn hydrogen peroxide solution to dry mist so that the H2O2 can spread in the whole enclosed space. The highly reactive hydroxyl and other radicals will deactivate or even kill bacteria, virus and other microorganisms through its highly oxidative character of destroying protein composing the bacteria, virus.

BED UNIT STERILIZER

床单位消毒器

床单位消毒器是一款以臭氧为消毒因子,可对医院病床被褥、枕芯、床垫、衣物等物品进行消毒的自动化程度较高的设备。通过排气、消毒、渗透、解析四个过程实现对物品的全方位消毒。

Hospital Bed disinfection machine is a kind of equipment with high degree of automation, which takes ozone as the disinfection factor to disinfected hospital bedding, pillow core, mattress, clothing and other beddings. Through the four processes of vacuum, disinfection, and ozonolysis, all articles can be disinfected.

产品参数 PRODUCT SPECIFICATIONS

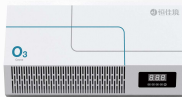

产品型号 Model	CDW.B	CDW.P	CDW.M
产品尺寸 mm Dimensions	320x380	320x380	480x310
重量 kg Weight	20	20	30
消毒件位数量 n (Batch Size)	1 或 2 1 or 2		

OZONE GENERATOR

臭氧消毒器

CY 系列臭氧消毒器使用介电阻挡放电式臭氧发生器,产生高浓度臭氧,利用风机将臭氧扩散到密闭空间内,对整个空间进行消毒。

CY range ozone generators use dielectric-barrier discharge technique to generate high concentration ozone and diffuse the produced ozone to enclosed space to achieve air sterilization.

AIR PURIFICATION SOLUTIONS FOR CENTRAL AIR CONDITIONING SYSTEMS

中央空调系统空气净化解决方案

AIR DISINFECTORS

空气消毒装置

风口气 VENT MOUNTED

风口气消毒器也称风机盘管式空气消毒器。主要通过盘管循环风的方式解决单个房间内的空气质量问题。室内空气在风机作用下由回风口进入，在经过滤网和等离子体作用下，超净净化PM2.5，杀灭空气中细菌的作用，从而提高室内空气质量。

Vent-mounted type air disinfectant mainly solves the air quality problems in a single room by circulating air with coil. The indoor air enters from the return air vent under the action of the fan. With the help of the filter and plasma electric field, it can effectively filter PM2.5 and kill the bacteria in the air, so as to improve the indoor air quality.

管道式 DUCT MOUNTED

管道式空气消毒器采用复合净化方式，高效物理杀灭空气中的细菌、病毒和微生物，净化PM2.5等可吸入颗粒物及烟雾等。是中央空调系统通风系统必备的空气净化设备，与空调回风（送风）管道连接，有效解决空调系统空气污染问题。

Duct-mounted type air disinfectant adopts the compound purification method, which can effectively physically kill the bacteria, viruses and microorganisms in the air, filter out PM2.5 and other inhalable particles and smoke. It is an essential air disinfection and purification equipment for central air conditioning duct ventilation system, and is connected with the air conditioning return air (supply air) duct to effectively solve the air pollution problem of the air conditioning duct.

插入式 PLUG IN

光氢离子空气消毒器利用光氢离子技术，使宽光子与专有特殊金属催化媒介反应，产生羟基离子、超氧氧离子、过氧化氢离子以及负氧离子，能有效杀灭环境中的细菌，分解空气中的有机挥发物，使环境空气洁净清新。

Photohydrogen ion air disinfectant uses photohydrogen ion technology to make wide wave photons react with special metal catalyst to produce hydroxyl ions, super oxygen ions, hydrogen peroxide ions and negative oxygen ions, which can effectively kill bacteria in the environment, decompose organic volatiles in the air, and make the ambient air clean and fresh.

DEVICE TUBE DISINFECTOR

回路消毒机

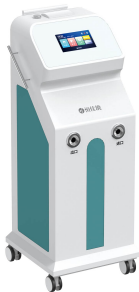

本机主要由雾化器、雾化杯、真空泵、空气过滤器、一体式臭氧发生器、控制系统、外壳等部分组成，利用臭氧与过氧化氢气体对呼吸机、麻醉机回路内部及其管路进行消毒。

This machine is mainly composed of atomization pump, atomization cup, vacuum pump, air filter, integrated ozone generator, control system, shell and other parts. It uses ozone and hydrogen peroxide gas to clean the inside of the ventilator, anesthesia machine pipe.

外形尺寸 mm Dimension	430x430x1050
重量 kg Weight	27
消毒时间 min Disinfection time	≥40

HCR-HX-A

LEAD APRON DISINFECTION CABINET

臭氧消毒柜 (铅衣专用)

臭氧消毒柜 (铅衣专用) 产品主要由风机、加热器、分子过滤器、雾化器、臭氧发生器等组成，采用消毒柜内空气在风机作用下循环经过柜体内各个消毒、净化模块，杀灭放入柜内物品上的细菌病毒，保护医务人员的身体健康。

产品适用于医院、医疗保健、科研机构等单位对铅衣、手术服、防护服、工作服、病员服等物品进行消毒净化处理。

The lead apron disinfection cabinet is mainly composed of fan, heater, molecular filter, atomizer, ozone generator, etc. The air in the cabinet circulates through each disinfection and purification module in the cabinet by the fan, and bacteria and viruses on items placed in the cabinet is killed, protecting the health of doctors and patients.

The product is suitable for disinfection, purification and drying of lead apron, surgical scrub, protective clothing, work clothes, patient clothing and other items in hospitals, medical facilities, scientific research institutions and other facilities.

HCR-XDG-2
